

Slice 3/LICE v4

Shiyan AI Assist

Date: 9 September 2026

Status: Prove the system. Do not wait on the founder master.

1. Statement

Shiyan AI Assist is the AI system that helps an independent creator take a creation to release, audience response and next best action.

The first single Shiyan Yishu is the founder proof. Other users use the same rails without that file.

2. What is proven

- Launch: shiyan-dap.vercel.app
- Create: /upload – file optional
- Assist / AI Content: /
- Prove: /nfts – one-click Acquire Shiyan Yishu
- Release: /single
- Market: /marketplace – Song, Playlist, Video
- Transfer: /playlist
- Act: /bot – Explore, Buy, Sell, or Trade Music and AI content

Proof object

Asset: Shiyan Yishu – First Single

Asset ID: cl_shiyan_yishu_001

Creator / owner: ECMcCready

State after acquire: reserved

Buyer: this session

Transfer rail: Playlist

3. Founder production path

Founder sources may arrive as Guitar Pro 8 MIDI and Cubase multitrack export.

Those files attach to the same asset ID.

They do not gate other users.

Upload stays production-available with "no master yet."

4. Founder Model z

z = next best action from two passes.

y,x fast = Grok

y,x deep = Hy4

Memory = Hugging Face shiyan-dap, model-agnostic, capital-allocation later.

Loop: event on /upload or /nfts → local memory row → dataset shiyan-dap/founder-z when HF_TOKEN exists.

<https://huggingface.co/shiyan-dap> is the destination. It is empty today. Do not train until there is more than founder traffic.

5. What is not claimed

No paid buyer.

No on-chain ERC-721 / ERC-1155 / SPL mint.

No product-market fit.

No marketplace liquidity pool.

6. Next slice

v5 = first non-founder project through the same acquire loop.

v6 = push founder-z JSONL to Hugging Face.

v7 = paid acquire or license, still fiat-first.
